

Sat Space Africa has accelerated its sales of Ka solution in Zimbabwe and Zambia.

Sat Space Africa – a leading provider of reliable and cost-effective internet services is now providing a Ka-band VSAT Internet solution in conjunction with Avanti Communications plc. The solution is provided using HYLAS 2 Ka-band satellite to provide high-speed broadband connectivity to small and medium sized businesses across Zimbabwe and Zambia.

Shimri Lotan, Managing Director of Sat Space Africa, commented: *“Our offering of affordable internet packages together with low entry level prices makes the service package very attractive for our customers in the cities and in rural areas. The biggest advance of using our solution as oppose to one offered by other players in the market is that we do not impose usage restriction. This enables our customers to connect seamlessly 24/7 without the worry of getting throttled while going over their daily data allocation.”*

JJ Masanga, The Sales Executive for Sat Space Africa in Zimbabwe and Zambia, commented: *“Our resellers find our supportive approach very helpful and its assisting them to integrate more customers to our network. The fact that we have a comprehensive portal for reseller and customers supports the same approach”*
